

Webcast - Environmental Litigation

October 14, 2020

NJICLE

About The Program:

Environmental litigation is a highly specialized area of the law, requiring an understanding of geological issues, hydrology, remediation techniques, manufacturing practices, environmental and insurance law, and investigative and litigation strategies. Successful claims often result in significant damages. Our Zoom webinar explores the complexities of environmental litigation and reviews the holdings and impact of recent high-profile cases. Our panel will review government policies related to environmental litigation and discuss strategies for handling claims.

Flaster Greenberg Speaker:

- Mitchell Kizner, Esq., Past Chair, NJSBA Environmental Law Section, Shareholder, Flaster Greenberg, PC

Topic:

Mitchell Kizner spoke on the impact of the *In re Accutane* decision issued by the New Jersey Supreme Court. That ruling requires trial courts to engage in a rigorous gatekeeping process before allowing scientific and technical expert opinions to be presented to the jury. As an environmental litigator, Mr. Kizner deals with expert opinions on a regular basis.
